

Sustainability Initiatives

Gresham Savage has introduced company policies and day-to-day practices to reduce its carbon footprint and promote sustainability. These include:

- Recycling, including placing a recycling bin at each employee's desk
- Using glass or ceramic dishes rather than paper or plastic
- Using cleaning products that are environmentally friendly
- Sending our holiday greeting card electronically rather than printing it
- Using motion-detecting lights throughout our offices to conserve energy
- Using paper that is sustainable, manufactured with 100% renewable energy, certified by the Forest Stewardship Council and made carbon neutral
- Using document management system for scanning paperwork and storing it electronically
- Moving toward becoming a paperless practice
- Continuing to look for ways to use less paper, electricity and other consumables
